

Automation

20 years of experience in automation engineering coupled with continuous development make it possible to offer powerful, high-quality, and yet low-maintenance and affordable systems for all areas of sewing technology, for textile cutting and separation, and for packaging and labeling.

Examples:

- Robotic sewing systems such as those used for the production of cleaning wipes or pillowcases result in time savings, higher quality, and increased production capacity
 - » [Download brochure „Robotic sewing system”](#)

- Automatic labeling machines are highly flexible in their application, being suitable for lot sizes as small as 1 such as in tailored garment manufacture, or for large quantities such as in mass production
