

R&D

We are constantly on the LOOKOUT for improvements and innovative solutions for our customers.

The growth factors that we constantly pursue include investments in technology, business processes, machinery, production sites, research and development, and cooperation with universities and research institutions.

R&D partnerships with universities and research institutions are part of our business agenda.

We work with renowned universities and research institutions to meet the rapidly increasing requirements and changes in all areas of sewing technology and automation engineering and to provide you with the latest and best market solutions.

As a result, we already have numerous projects in our track record, such as our cooperation with the Chemnitz University of Technology and various Steinbeis Transfer Centers.
